

6 U WITH RECESSED MOUNTING FRONT FOR CABLING

REQUIREMENT

Customer needs a 6U subrack with recessed mounting front for cabling. All must be covered by a side hinged front panel. Guide rails for the PCB's must be assembled (assembly service). Mixed 3 and 6U boards inside the subrack.

CHALLENGE

Use the existing piece parts from our subrack platform to receive a custom oriented price for the solution. Room for cabling between the hinged front panel and the PCB's beside this panel. Assembling of guide rails due to customer requirements.

SOLUTION

Customer can use most of our standard offering. Furthermore all guide rails must be assembled. Due to the fact that customer does not have the opportunity to assemble the subrack himself, Schroff offers this service. Customer only has to integrate his PCB's or power supplies.

Project Details

Location	Europe
Type of system	Subrack / Module support for industrial use
Technology	EuropacPRO
Product scope	19" form factor with power modules conform to DIN 43880
Date/Time frame	2013 -
Contract scope	-
