Test Report No.: U0ES0003

Order No.: U0ES

Pages: 29

Munich, Nov 29, 2006

| | |
|--|--|
| Client: | Schroff GmbH |
| Equipment Under Test: | Micro TCA-shelf 14 slot completed with 12 AMC Modules with weights and two filler panels |
| Manufacturer: | Schroff GmbH |
| Task: | Conformance test according to the below mentioned test specifications Vibration, Shock, Earthquake |
| Test Specification(s): [covered by accreditation] | IEC 60068-2-6, Test Fc: Vibration (sinusoidal) IEC 60068-2-27, Test Ea and guidance: Shock IEC 60068-2-57, Test Ff: Vibration –Time-history method |
| Test Specification(s): [not covered by accreditation] | IEC 61587-1 IEC 61587-2 |
| Result: | The EUT was subject to the tests listed in detail in ch. 6 of this report and complies with the corresponding requirements. |

The test report shall not be reproduced except in full without the written approval of the testing laboratory

The results relate only to the items tested as described in this test report.

1 Summary

Testing was performed to determine if the MicroTCA shelf 14 slot meets the requirements of

IEC 60068-2-6, IEC 60068-2-27, IEC 60068-2-57

IEC 61587-1: 1999-06

Mechanical structures for electronic equipment - Tests for IEC 60917 and IEC 60297;
Part1: Climatic, mechanical tests and safty aspects for cabinets, racks, subracks and chassis

IEC 61587-2: 2000-12

Mechanical structures for electronic equipment - Tests for IEC 60917 and IEC 60297;
Part2: Seismic tests for cabinets and racks

The performed Earthquake tests are also covered in the specifications of

GR 63 CORE , Issue 3: March 2006

NEBS Requirements : Physical Protection

Part 5.4.1 Earthquake Test Methods

ETSI EN 300 019-2-3 V2.2.2 (2003-04)

Environmental Engineering (EE);

Environmental conditions and environmental tests for telecommunications equipment;

Part 2-3: Specification of environmental tests; Stationary use at weatherprotected locations

Part 4 Earthquake test specification

The EUT shows no physical damage during and after the tests.

The table below contains a detailed list of tests performed.

| Tested Requirement(s) | Test Passed | Remark |
|--|-------------|--------|
| IEC 60068-2-6, Test Fc: Vibration (sinusoidal) | yes | |
| IEC 60068-2-27, Test Ea and guidance: Shock | yes | |
| IEC 60068-2-57, Test Ff Vibration –Time-history method | yes | |

The test report shall not be reproduced except in full without the written approval of the testing laboratory

4 Equipment Under Test

Micro TCA – shelf Part No.: 20849-095 total weight with boards 11,5Kg

mounted in a special frame for Vibration-, Shock- and Earthquake testing.

Pic. 1 EUT front side

The MicroTCA shelf 14 slot was completed with:

12x AMC Module FS-D – Dummyboards weight: 0,712 Kg
2x filler panels on left and right side without additional weights.

Pic. 2 AMC Module FS-D - Dummyboard

The test report shall not be reproduced except in full without the written approval of the testing laboratory

4.1 Failure Criteria

No mechanical deviations.

The test report shall not be reproduced except in full without
the written approval of the testing laboratory

5 Test Equipment

5.1 Test Facility

The measurements were carried out in the Center for Quality Engineering: Siemens Networks GmbH & Co. KG, Department SN CTO CQE CoC3, Hofmannstraße 50, 81359 München, Germany.

5.3 Measurement Uncertainty

The measurement uncertainty is given by the used equipment. Detailed information can be seen in the technical descriptions of the used equipment and in the calibration data sheet. It is available on request.

The test report shall not be reproduced except in full without the written approval of the testing laboratory

6 Test Specifications and Results

The test results in the report refer exclusively to the test object described in section 4 and the test period in section 3.3.

6.1 Test Specification

6.1.1 Vibration and shock test:

IEC 61587-1: 1999-06

Mechanical structures for electronic equipment - Tests for IEC 60917 and IEC 60297;
Part1: Climatic, mechanical tests and safty aspects for cabinets, racks, subracks and chassis

Table 11: Performance Level DL1

6.1.1.1 Resonance search - Vibration (sinusoidal)

| Test | Parameter | Test Severity | Reference | Method |
|----------------------|-------------------|--------------------|---------------|----------------------------|
| Vibration sinusoidal | Acceleration | 2 m/s ² | IEC 60068-2-6 | Fc: Vibration (sinusoidal) |
| | Frequency range | 10-150 Hz | | |
| | Axes of vibration | 3 | | |
| | Duration | 3 x 1 sweep cycles | | |

Test Performance

For the tests the EUT was screwed with 8x M6 screws into a special mounting frame and were fixed to the shaker table (see pic 7-9).

The test was performed in 3 mutually perpendicular axes.

horizontal longitudinal front to back = Y-axis
horizontal lateral = X-axis
vertical = Z-axis

The tests were performed in normal use attitude.

The test report shall not be reproduced except in full without the written approval of the testing laboratory

Pic. 3 Mounting of EUT at vibrator table, Z-Axis

Pic. 4 Mounting of EUT at vibrator table, Y-Axis

For vibration in direction X-axis the EUT was rotated by 90° at the shaker table.

The test report shall not be reproduced except in full without the written approval of the testing laboratory

For Resonance search three accelerometers are positioned at the upper rear side of the shelf.

Pic. 5 Position of accelerometers

Test Result

No visible mechanical deviations were identified.

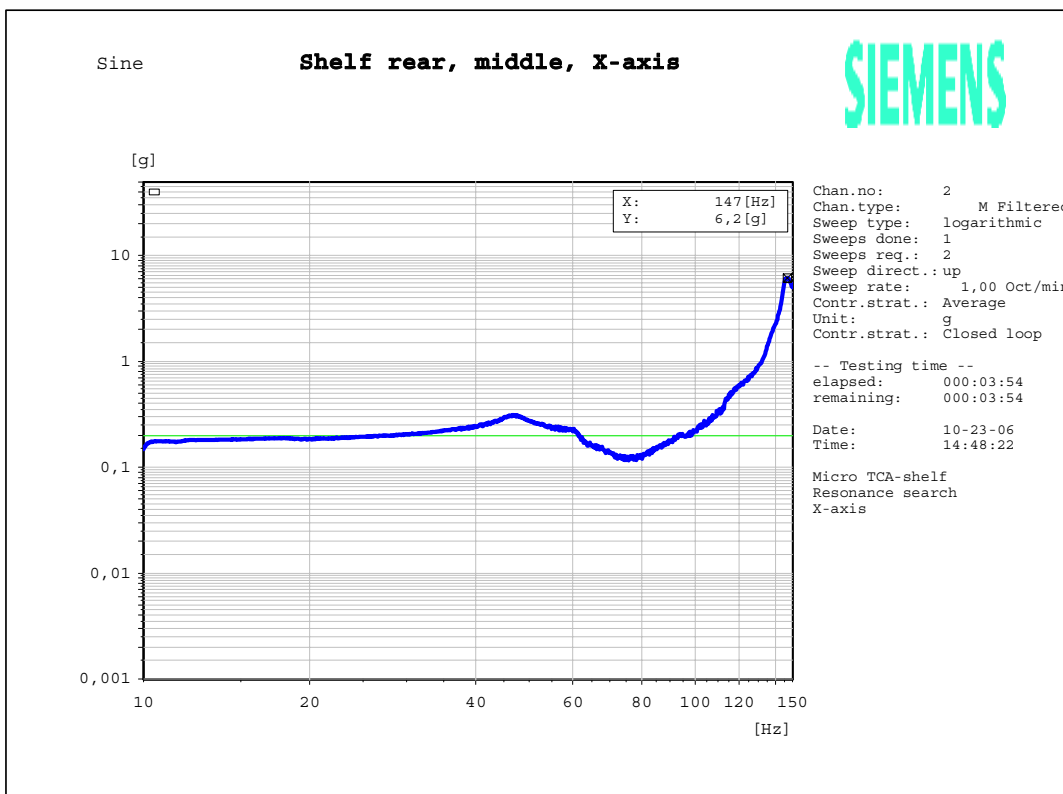

Diagrams of the recorded accelerations:

The test report shall not be reproduced except in full without the written approval of the testing laboratory

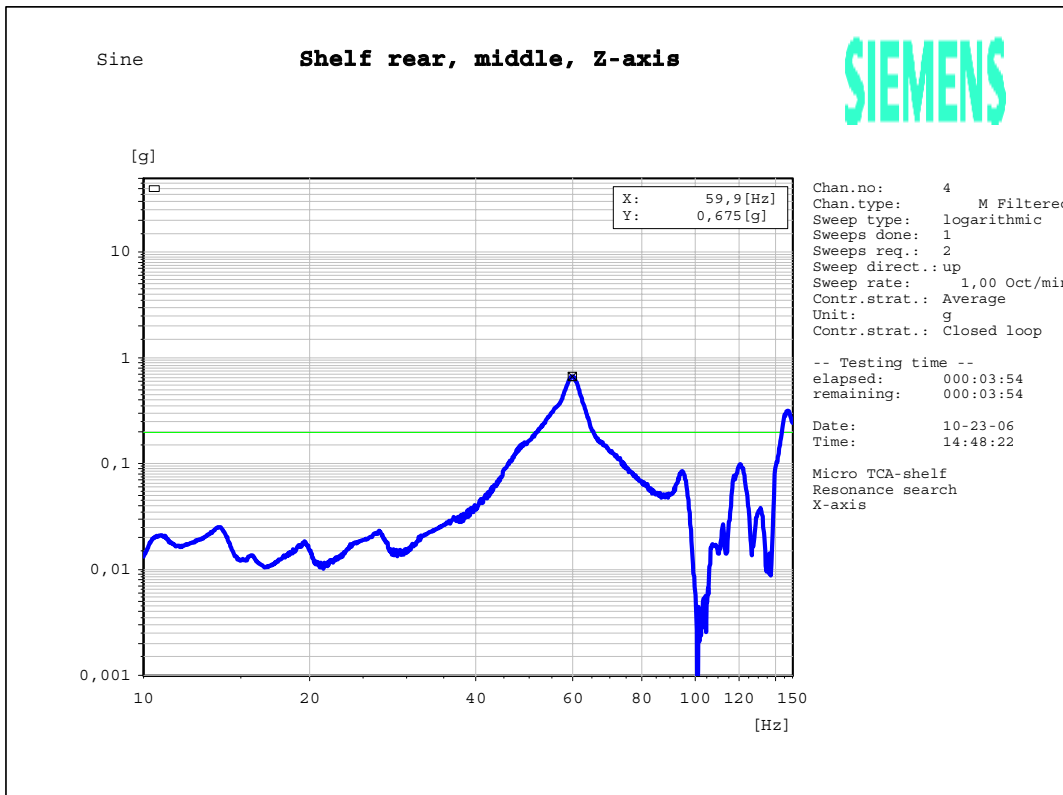

Resonance search X-axis

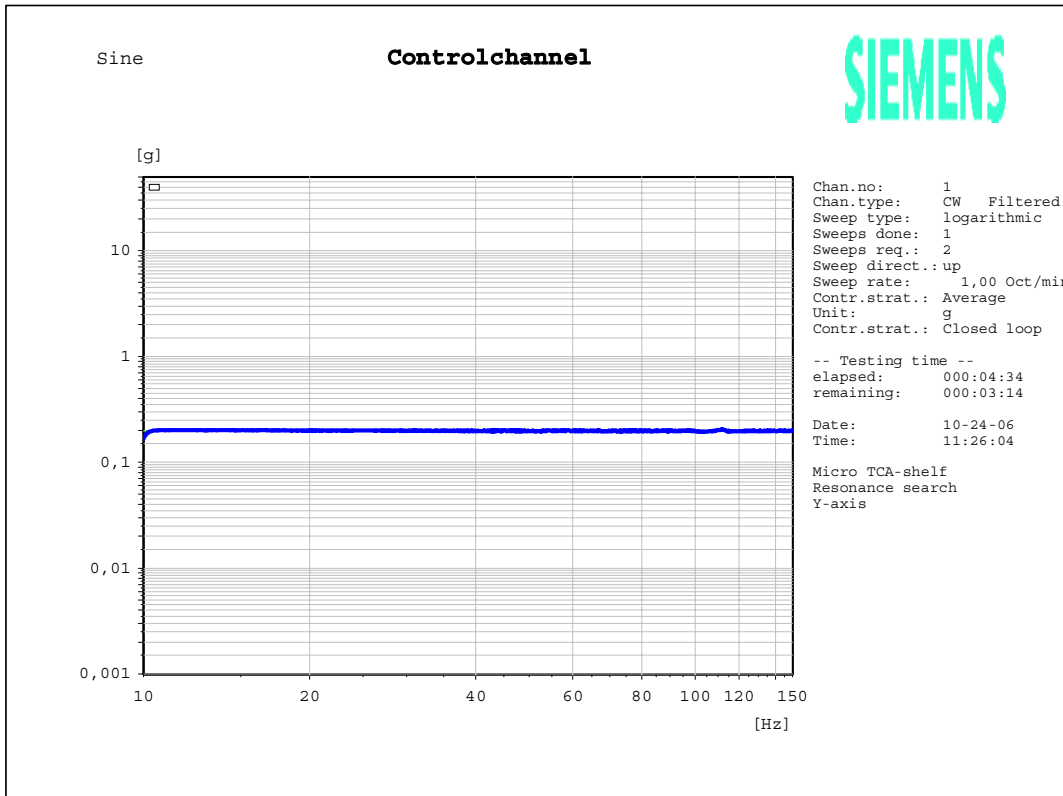

The test report shall not be reproduced except in full without the written approval of the testing laboratory

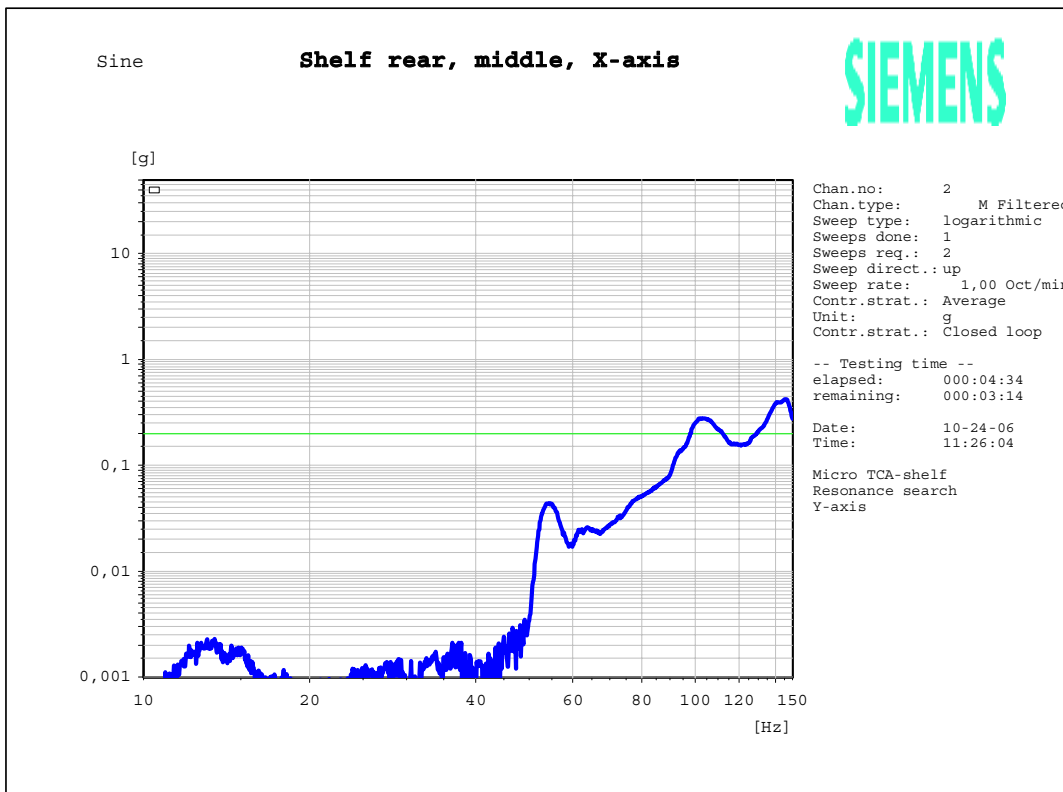

The test report shall not be reproduced except in full without the written approval of the testing laboratory

Resonance search Y-axis

The test report shall not be reproduced except in full without the written approval of the testing laboratory

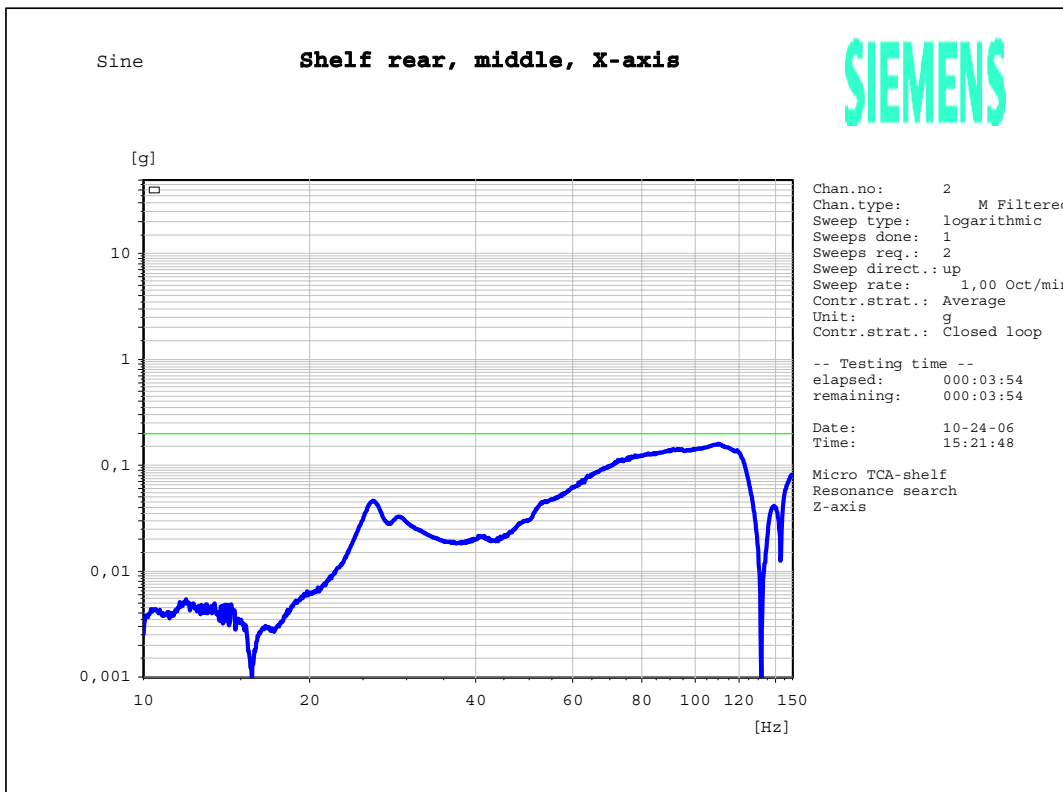

The test report shall not be reproduced except in full without the written approval of the testing laboratory

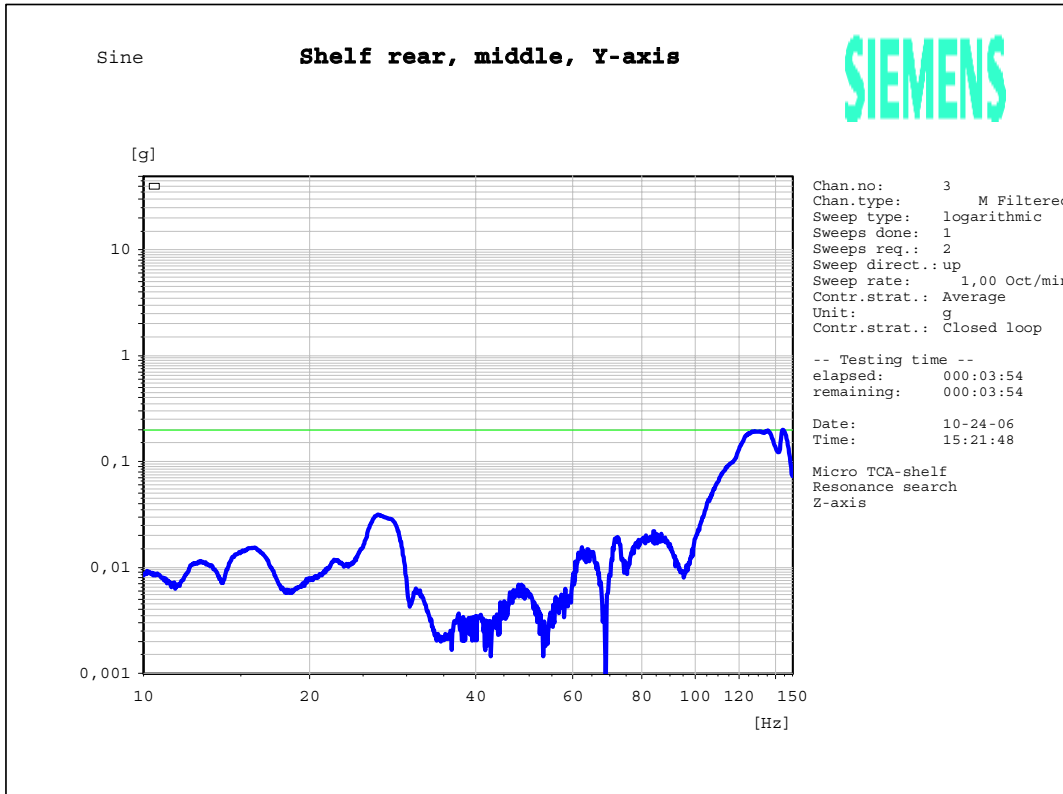

Resonance search Z-axis

The test report shall not be reproduced except in full without the written approval of the testing laboratory

The test report shall not be reproduced except in full without the written approval of the testing laboratory

6.1.1.2 Vibration (sinusoidal)

| Test | Parameter | Test Severity | Reference | Method |
|----------------------|--|--|---------------|----------------------------|
| Vibration sinusoidal | Displacement Acceleration Frequency range Axes of vibration Duration | 0,075 mm 9,8 m/s ² 10-62 Hz 62-200 Hz 3 3 x 20 sweep cycles | IEC 60068-2-6 | Fc: Vibration (sinusoidal) |

Test Performance

Mounting of EUT the same as for Resonance search (see 6.1.1.1)

The test was performed in 3 mutually perpendicular axes.

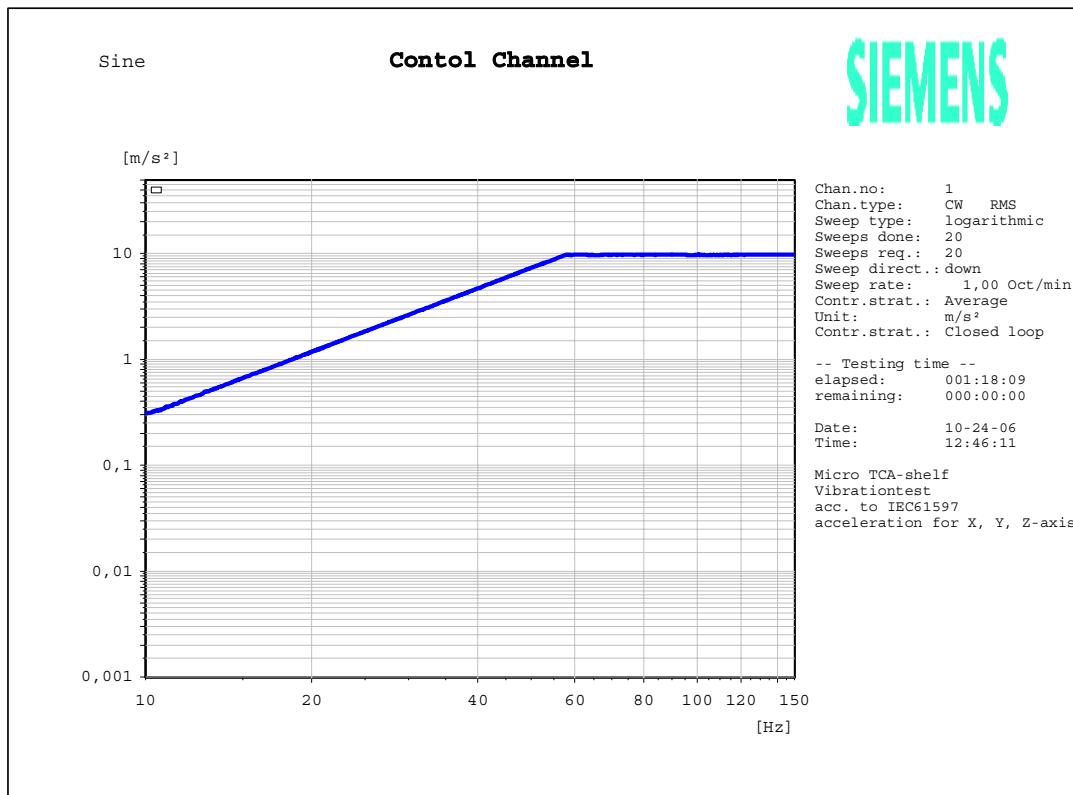

horizontal longitudinal front to back = Y-axis
horizontal lateral = X-axis
vertical = Z-axis

The tests were performed in normal use attitude.

Test Result

No visible mechanical deviations were identified.

Diagram of the recorded acceleration at vibrator table:

The test report shall not be reproduced except in full without the written approval of the testing laboratory

6.1.1.3 Shock

| Test | Parameter | Test Severity | Reference | Method |
|--------|--|--|----------------|-----------|
| Shocks | Shock spectrum Shock duration Acceleration Number of Shocks Directions of Shocks | half sine 11 ms 30 m/s ² 3 in each dir. 6 | IEC 60068-2-27 | Ea: Shock |

Test Performance

Mounting of EUT the same as for Resonance search (see 6.1.1.1)

The test was performed in 3 mutually perpendicular axes.

horizontal longitudinal front to back = Y-axis
horizontal lateral = X-axis
vertical = Z-axis

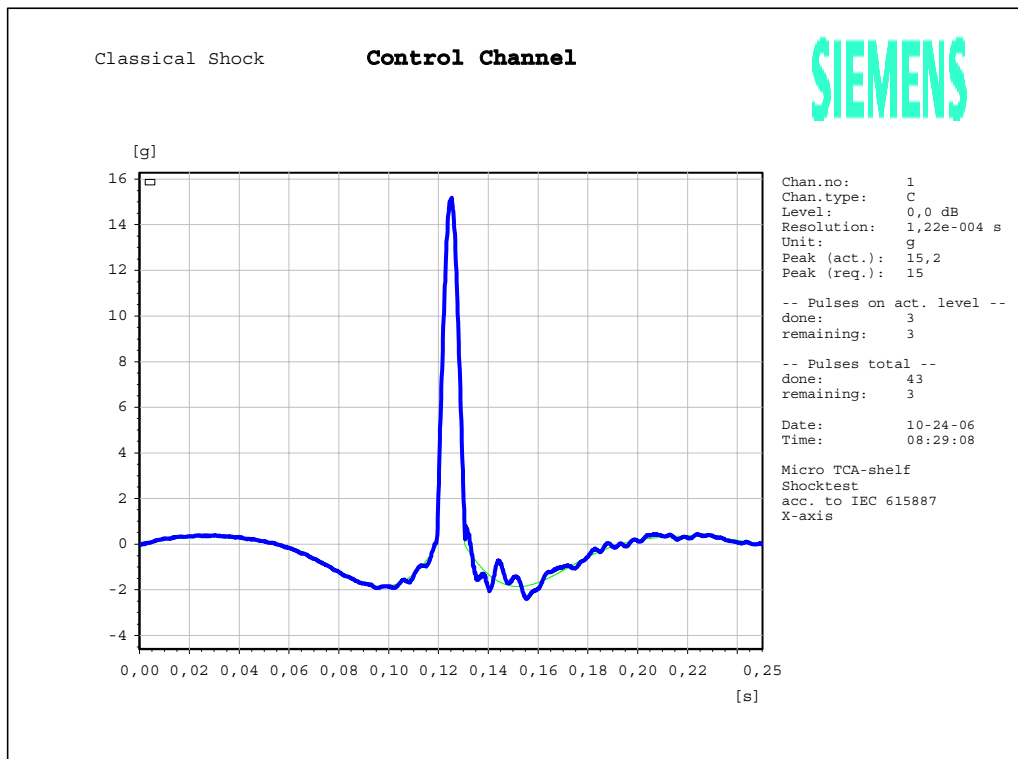

The tests were performed in normal use attitude.

Test Result

No visible mechanical deviations were identified.

Diagrams of the recorded acceleration at vibrator table:

X-axis

6.2 Earthquake test:

IEC 61587-2: 2000-12

Mechanical structures for electronic equipment - Tests for IEC 60917 and IEC 60297;
Part2: Seismic tests for cabinets and racks

Waveform A

6.2.1.1 Earthquake Waveform and Required Response Spectrum

| Test | Parameter | Dim | Test severity | Duration | Reference | Method |
|----------------------------|-----------------|------------------|---------------|----------|-------------|-------------------------------|
| Earthquake Time History | RRS | | Table 5 | 30 sec | IEC 68-2-57 | Ff: Time History Method |
| | Frequency Range | Hz | 1 – 15 | | | |
| | ZPA | m/s ² | 16 | | | |
| | Axes | | 3 | | | |
| | Damping ratio | % | 2 | | | |

Table 5 Acceleration Coordinates for the RRS

| Co-ordinate Point | Frequency (Hz) | Ground Acceleration (m/s ²) |
|-------------------|----------------|---|
| 1 | 1,0 | 30 |
| 2 | 2,0 | 50 |
| 3 | 5,0 | 50 |
| 4 | 15,0 | 16 |
| 5 | 50,0 | 16 |

The test report shall not be reproduced except in full without the written approval of the testing laboratory

Fig. 6.1: Earthquake Required Response Spectrum

Fig. 6.2: Earthquake Synthesized Waveform VERTEQ II Zone4
Test Performance

For the tests the EUT was screwed with 8x M6 screws into a special mounting frame and were fixed to the earthquake table (see pic 11-13).

The test was performed in 3 mutually perpendicular axes.

- horizontal longitudinal front to back = Y-axis
- horizontal lateral = X-axis
- vertical = Z-axis

The tests were performed in normal use attitude.

A video taken from tests in all three axes is part of the documentation.

The test report shall not be reproduced except in full without the written approval of the testing laboratory

Pic. 6 Mounting of EUT X-Axis (horizontal lateral)

Pic. 7 Mounting of EUT Y-Axis (horizontal longitudinal)

Pic. 8 Mounting of EUT Z-Axis (vertical)

For Z-axis test (vertical), a vertically oriented piston underneath the table is used.

Control point in direction of excitation and recording the time history over a time of 35 sec

The test report shall not be reproduced except in full without the written approval of the testing laboratory

The test report shall not be reproduced except in full without the written approval of the testing laboratory

6.3 Test Result

No visible mechanical deviations were identified.

Earthquake TRS vs. RRS and Acceleration at EUT

The shaker table's analysed acceleration, known as Test Response Spectrum (TRS, red line), must meet or exceed the Required Response Spectrum (RRS, blue line) for the Earthquake Risk Zone 4 in the range from 1.0 to 35 Hz.

The following diagrams show the recorded plots for each axis.

Excitation in direction of x-axis
