

# VARISTAR COLOCATION CABINETS

MAXIMUM ACCESS PROTECTION AND FLEXIBLE CABLE MANAGEMENT

With the new Schroff branded Varistar colocation cabinet series, Pentair offers a secure cabinet with multiple compartments that has been specially developed for IT infrastructure and data centers.

The Varistar colocation cabinet is available with two, three or four compartments in eight different cabinet dimensions. Additional cladding and extension components from our standard product portfolio can be configured at any time.

It features secure shelf dividers and cable routings that are attached to the frame at multiple points.

The shelf dividers and cable routings of each compartment are strictly separated from one another. This provides the highest level of security for the access to the components installed in the compartments. Owing to their design, it is also possible to use the shelf dividers as cable trays.

Two-point door locking provides additional security plus robustness and is equipped with combination locks (numeric code and master key) as standard.

The well-designed cable management ensures separation of data and power cables and allows cable entry from above and below and from left and right.

## ADVANTAGES AND BENEFITS OF VARISTAR COLOCATION CABINETS

---

- Wide selection of standard dimensions and configurations
- Short delivery time of 10 working days
- Sophisticated infrastructure solutions and product combinations
- Secure locking
- Flexible cable ducting with separation of data and power cables
