

The Schroff product line offers an extremely broad range of configurations, not all of which are detailed in the datasheets. Commonly requested modifications include:

- 7 and 9 or more wedge segments
- Additional wedges for higher clamping force
- Different wedge dimensions from the catalog offering
- Integrated card lok with sawtooth design for Conduction Cooled Assemblies
- Lengths outside of our standard catalog offering
- Profiles outside of our standard catalog offering
- Relocation or addition of mounting holes
- Screw head activation different from M2.5 and 3/32 hex socket
- Replacement of split washers with Belleville washers
- Add chamfers
- Materials with different alloys from the catalog offering
- Different lever lengths than those offered in the catalog
- Different hardware including screw threads, thread-locking mechanism and bonded washers
- Ejection feature similar to E225
- Secured wedges
- Modification of extractors
- Custom silkscreen

The catalog offers the configurations that meet most applications, but if you don't see what you're looking for in the catalog, please call us. Our applications engineers can help you specify a cost effective design suited for your application.
